Snapshot Report

ICES 2004-454XL4

The National Assessment of Educational Progress (NAEP) assesses mathematics on a 0-500 point scale. In 2003, Los Angeles Unified was one of nine urban districts that voluntarily participated in the NAEP mathematics assessment on a trial basis.

Overall Mathematics Results for Los Angeles

- In 2003, the average scale score for fourth-grade students in Los Angeles was 216. This was lower¹ than that of the nation's public schools (234).
- Los Angeles' average score (216) in 2003 was lower than that
 of public schools in large central cities² (224), and lower than
 that of California (227).
- The percentage of students in Los Angeles who performed at or above the NAEP *Proficient* level was 13 percent in 2003.
 The percentage of students in Los Angeles who performed at or above the *Basic* level was 52 percent.

NOTE: The NAEP mathematics scale ranges from 0 to 500, with the achievement levels corresponding to the following points: Below *Basic*, 213 or lower; *Basic*, 214-248; *Proficient*, 249-281; *Advanced*, 282 or above.

Performance of NAEP Reporting Groups in Los Angeles								
	Percentage	Average	Percentage of students at					
Reporting groups	of students ³	Score	Below Basic	Basic	Proficient	Advanced		
Male	51	219 ↓	43 🕇	41	14 ↓	1 ↓		
Female	49	213 ↓	53 ↑	36 ↓	10 ↓	1 ↓		
White	11 ↓	241	17	39	40	4		
Black	10 ↓	208 ↓	58	36	6	#		
Hispanic	73 ↑	211 ↓	54 ↑	38 ↓	7 ↓	#↓		
Asian/Pacific Islander	6	241	14	48 🕇	34	4 ↓		
American Indian/Alaska Native	#↓							
Free/reduced-price school lunch								
Eligible	83 ↑	212 ↓	53 ↑	38 ↓	8 ↓	#↓		
Not eligible	5 ↓	229 ↓	30 ↑	45	23 ↓	2		

Average Score Gaps Between Selected Groups

- In 2003, male students in Los Angeles had an average score that was higher than that of female students (6 points). This performance gap was wider than that of the Nation (3 points).
- In 2003, White students had an average score that was higher than that of Black students (33 points). This performance gap was not significantly different from that of the Nation (27 points).
- In 2003, White students had an average score that was higher than that of Hispanic students (30 points). This performance gap was not significantly different from that of the Nation (21 points).
- In 2003, students who were not eligible for free/reduced-price school lunch had an average score that was higher than that of students who were eligible (17 points). This performance gap was not significantly different from that of the Nation (23 points).

Mathematics Scale Scores at Selected Percentiles

Scale Score Distribution

25 th	50 th	75 th
Percentile	Percentile	Percentile
196 ↓	215↓	235 ↓
204 ↓	224 ↓	245↓
215	235	254
	Percentile 196 ↓ 204 ↓	Percentile Percentile 196 \ 215 \ 204 \ 224 \

An examination of scores at different percentiles on the 0–500 NAEP mathematics scale at each grade indicates how well students at lower, middle, and higher levels of the distribution performed. For example, the data above show that 75 percent of students in public schools nationally scored below 254, and 75 percent of students in Los Angeles scored below 235.

- --- Reporting standards not met; sample size insufficient to permit a reliable estimate.
- * Significantly different from Los Angeles.
- \uparrow Significantly higher than, \downarrow lower than appropriate subgroup in the nation (public).

Office of Management and Budget. It is not synonymous with "inner city." In Los Angeles, 24 percent of students were in "Fringe/large city" areas.

3 For comparison, minority students comprised 78 percent of students in large central city public schools and 42 percent in public schools nationally. Also, students eligible for free/reduced-price school lunch comprised 69 percent of students in large central city public schools and 44 percent in public schools nationally.

NOTE: Detail may not sum to totals because of rounding, and because the "Information not available" category for Free/reduced-price lunch is not displayed. Statistical comparisons are calculated on the basis of unrounded scale scores or percentages.

[#] The estimate rounds to zero.

¹ Comparisons (higher/lower/not different) are based on statistical tests. The .05 level was used for testing statistical significance. Performance comparisons may be affected by differences in exclusion rates for students with disabilities and limited-English-proficient students in the NAEP samples and changes in sample sizes. NAEP sample sizes have increased in 2003 compared to previous years, resulting in smaller detectable differences than in previous assessments.

² "Large central city" includes nationally representative public schools located in large central cities within metropolitan statistical areas as defined by the federal
